INTRODUCTION

1.1 General Overview

Our website has various kinds of information that helps regarding booking of tickets via railways . Users will be able to search the train availability ,the exact fare ,the arrival and departure time of the train .

1.2 Survey

Railway passengers frequently need to know about their ticket reservation status, ticket availability on a particular train or for a place, train arrival or departure details, special trains etc.. Customer information centers at the railway stations are unable to serve such queries at peak periods. The number of the reservation counters available to the passengers and customers are very less. On most of the reservation systems there are long queues, so it takes a long time for any individual to book the ticket. As now there are no call centers facilities available to solve the queries of the passengers.

RAILWAY

The online railway ticket reservation system aims to develop a web application which aims at providing trains details, trains availability, as well as the facility to book ticket in online for customers. So, we thought of developing a web based application which would provide the users all these facilities from his terminal only as well as help them in booking their tickets. The Application was to be divided into two parts namely the user part , and the administrator part. And each of these has their corresponding features. We decided to give the name of the website "ONLINE RAILWAY TICKET RESERVATION". The online railway ticket reservation system is developed using ASP.NET with C# as the backend in the .NET Framework.
